Specialized Clinical Services for People with Developmental Disabilities and Autism Spectrum Disorder

2 Surrey Place, Toronto, ON M5S 2C2 / T: 416-925-5141 / F: 416-925-3402 / www.surreyplace.ca

Overview

The Psychology Residency program exists to provide senior level doctoral students with training opportunities to enhance the development of the core competencies required for psychologists as declared in the Mutual Recognition Agreement of the Regulatory Bodies for Professional Psychology in Canada (2004), and to be professionals in the field of clinical psychology. The main purpose of the Residency is to develop psychologists who are competent to provide clinical work with children, adults, and their families, with a special focus on providing service to persons with developmental disabilities across the lifespan.

The two pre-doctoral residency positions are offered through both the Children and Adult Programs at Surrey Place in Toronto, Ontario. The one-year, full-time training position begins on the day after Labour Day - Tuesday, September 3, 2024. The full-year pre-doctoral residency program was initially accredited with the Canadian Psychological Association (CPA) in 2015, and in 2022, it was most recently accredited by the CPA for a 5-year term (2022 - 2027). The residency standards from CPA for application, rotations and delivery of the program are followed.

The CPA Accreditation Office address is:

702-141 Laurier Ave W, Ottawa, Ontario, CANADA K1P 5J3

The department of psychology exists within Surrey Place and spans across all programs, including Infancy and Early Childhood, Children & Youth; Autism Services; Adult Services; Developmental Services Ontario; MMW and northern Ontario partnerships, as well as several specialized clinics spanning the programs, including the FASD assessment clinics.

Currently, as of 2024, there are 14 registered psychologists, 3 psychometrists, 2 psychology residents and 2 psychology practicum students.

Tour of the Facilities

Surrey Place

Located in downtown Toronto, Surrey Place is an interdisciplinary community-based organization that provides a range of services for people living with developmental disabilities. We are dedicated to helping every client reach their potential – at every stage in life. With highly skilled staff and dedicated teams, we're making a real difference through inspired leadership, service and research excellence, community collaboration and creative capacity building. Surrey Place provides complex assessments and diagnostics, a full range of therapeutic services (psychotherapeutic, behavioural, speech-language, occupational, developmental), service coordination, and educational programs to people living with a developmental disability and their families.

Surrey Place is the lead agency in a community partnership initiative entitled the Toronto Autism Services, which provides evidence-based intensive behavioural intervention to children with autism and facilitates transition planning for children moving into the school system. This program is part of the new Ontario Autism Program (OAP). Within the Infancy and Early Childhood program (0 – 6), Surrey Place supports children with developmental disabilities as well as specifically the Early Abilities program and the Blind-Low Vision program. Additionally, Surrey Place has a Children and Youth Program (6-18), as well as the School Support Program and the Treatment Research and Education for Autism and Developmental Disorders (TRE-ADD).

Within the Adult Program, Surrey Place provides consultation to a wide variety of community professionals through innovative programs including the Videoconferencing Mental Health initiative serving clients and professionals in Northern Ontario. Additional adult programs include the Parenting Enhancement Program (PEP), Augmentative Communication & Writing Aids Program (ACWA) The Adult program houses the Community Networks of Specialized Care (CNSC) for complex client care and the Plus 45 Clinic for consultation for aging concerns for adults with DD, and is the lead agency for Developmental Services Ontario (DSO). Surrey Place has two Fetal Alcohol Spectrum Disorder diagnostic clinics; the Adult FASD Team and the Child FASD Team.

Covid-19 impact on Training

The Surrey Place Psychology Residency is committed to the training of future psychologists, and this remains the priority since the onset of the pandemic. Clinical care, training and safety of all our staff is of utmost importance. Currently, Surrey Place is now fully open for in person clinical services, with hybrid options available upon request. The virtual services include secure videoconferencing for both clinical services as well as supervision, interdisciplinary team meetings, didactic seminars and case presentations. The residents are encouraged to obtain clinical experience in an in-person format, with the understanding that this may change depending on the Ontario government guidelines surrounding the pandemic. In other words, if the Surrey Place Infection Prevention and Control team recommend office closures, all staff will move to a virtual format. Surrey Place employees, including psychology residents are required to show proof of full vaccination prior to their start date (or obtain an approved exemption based on disability (medical), creed (religion) or other Ontario Human Rights Code).

Specialized Clinical Services for People with Developmental Disabilities and Autism Spectrum Disorder

Philosophy of training

The philosophy of the Residency follows the scientist-practitioner model of psychology in that it combines the scientific foundation of psychology with its practical applications. Training involves the integration of clinical and research skills in the assessment and treatment of individuals with developmental disabilities. This involves the use of evidence based assessments and interventions, with the objective evaluation of treatment and program outcomes, and with research and teaching activities. The training program provides an integrated approach to mental health and behaviour, including biological, cognitive, affective, and social perspectives, which can be applied to individuals with developmental disabilities. We are committed to providing new knowledge in the area of developmental disabilities through our involvement in program evaluation, research, training, and teaching.

Developmental Practitioner perspective

The Surrey Place Psychology Residency is guided by a Developmental Practitioner perspective. The program provides a training environment that facilitates a Resident's transition from graduate student to professional psychologist and builds upon the theoretical, empirical, and clinical foundations that Residents receive from their academic psychology programs. Specific goals are decided based on a Resident's level of competence when entering the program and addressed in individual and group supervision. These mechanisms allow Residents to calibrate their professional autonomy based on their comfort level with new skills along with the complexity of the case. As their competence progresses, they are given the opportunity to supervise and consult to staff and medical Residents. The opportunity to work with care providers at earlier developmental stages provides perspective on their professional abilities. We believe that apprentice relationships are central to developing skills in a supportive environment, and Residents can be involved in co-assessments and co-therapy, co-leadership, and consultative relationships in a number of rotations. Clinical practice is the final medium that fosters the professional growth of the Resident. Along with training, supervision, and mentorship, service provision becomes a medium for Residents to learn about the complexity of providing services to individual clients with varying needs.

Educational and training opportunities

Residents are introduced to support staff and the administrative process at Surrey Place. Upon beginning each rotation, supervisors attend clinical team meetings with Residents and introduce them to the interdisciplinary teams and orient them to the particular processes and schedules of that rotation. Residents are provided training in Non-Violent Crisis Intervention (SMG); First Aid & CPR; Suicide Assist Training; EDIA training modules; Indigenous Cultural Awareness; and FASD trainings. All Surrey Place staff trainings are available to the Residents at no cost. In addition to staff trainings, Residents will have:

- *Weekly Psychology Group Didactics* (Residents & Practicum Students)
- *5 Toronto Area / Ontario Psychology Resident seminars*
- *5 National Psychology Resident seminars*, via the CCPPP
- *Surrey Place Psychology Discipline meetings* (quarterly)
- *Bi-Annual College of Psychologists of Ontario Ethics workshop* (Barabra Wand)

Specialized Clinical Services for People with Developmental Disabilities and Autism Spectrum Disorder

Surrey Place Psychology Residency has partnered with Psychology Residencies & Internships in Toronto, and now Ontario wide, to provide 5 half-day seminar series on the topics of: Ethics; Supervision; Professional Development; EDIA ; and Ontario College of Psychologists Licensure. Residents are allotted Education Days (maximum 5 days) which can be used at the discretion of each Resident. For example, the paid education days may be used for their PHD dissertation defense; and/or attendance at workshops or conferences.

Clinical practice opportunities

The Residency program focuses on applied training through educational seminars/events, clinical practice, and supervision. Residents can expect to spend a significant proportion of their time in direct client care, which involves psychological assessment and intervention, clinical interviewing, consultation with parents/families, and individual and/or group counseling. When not engaging in these direct care activities, Residents will be involved in a number of indirect aspects of client care, such as report writing, file review, administrative tasks, scoring and interpreting test results, and attending team meetings and clinical rounds.

Residents can gain experience with a breadth of psychological disorders across the lifespan. As a leader in the field of developmental disabilities, Surrey Place provides services to people of all ages living with or suspected of having a wide variety of developmental disabilities, and training will introduce Residents to both common and rare etiologies. Diagnoses include pervasive developmental disorders and a wide range of developmental disabilities (Down syndrome, Fetal Alcohol Syndrome, Fragile X, Cerebral Palsy, etc...), behavioural disorders, personality disorders, and psychiatric disorders (anxiety, mood, psychotic disorders). Presenting problems can include family discord, learning challenges, self-injurious behaviour, homelessness, service utilization issues, differential diagnosis, forensic and offending behaviour, and age-related issues.

Recognizing that disabilities present different challenges to individuals at different stages of their development, the Residency also endeavors to expose the Resident to a lifespan perspective. An important and significant focus of training is its consultation to community agencies and professionals, and Residents will have the opportunity to develop competence in the provision of supervision and consultation, critical skills for clinical psychologists. Residents have the opportunity for training with several different rotations. Each rotation has its own process and focus, and Residents will learn about the role that psychologists play in a variety of capacities. Breadth is provided in terms of the various age groups that Residents will work with. Residents will have the opportunity to implement behaviour therapy, play therapy, or individual therapy, depending on the age and abilities of their clients and the intervention style modeled by their supervisors. There is also tremendous breadth in terms of the complex needs and abilities of clients and families, which necessitate a variety of approaches. In addition, Residents have the opportunity for training in various therapeutic modalities including brief family therapy (particularly parent focused), individual therapy, and group therapy.

Specialized Clinical Services for People with Developmental Disabilities and Autism Spectrum Disorder

Program Structure

The Residency program offers 2 rotations spanning the full training year (12 months). Both Surrey Place Psychology Residents will have a 2 day a week CHILD rotation, as well as a 2 day a week ADULT Rotation. Additionally, both Residents will have 1 day a week reserved for didactics and residency supervision.

Clinical Rotations:

1) CHILD Rotation (2 days per week – full year)

In the Child rotation, Residents have the opportunity to work with both the children, and /or their parents and families. The residents can choose a child rotation that primarily focuses on children and adolescents with a diagnosis of Autism Spectrum Disorder (Autism program), or with children and adolescents with a co-diagnosis of autism and intellectual disability (Child & Youth Programs). Individual play therapy, family therapy, group work, counselling with parents, assessments and consultation to the home, school and community agencies possible. Rotation preference is confirmed post match, and will be respected within the confines of the supervisor availability to the best of our ability.

2) ADULT Rotation (2 days per week – full year)

In Adult Services, Residents will work with adults 18 years of age and over with a variety of developmental disabilities, in the areas of assessment and counseling. Assessment opportunities include cognitive and memory testing, baseline and dementia assessments, and diagnostic assessments of mental health. Group intervention experience is also available. An opportunity to work within a clinical videoconferencing program which provides services with Indigenous populations in remote northern Ontario communities is also possible based on Residents interest and supervisor availability.

Supervision and mentorship opportunities

Along with the four hours of required supervision from supervising psychologists, (registered with the College of Psychologists of Ontario), Residents are provided with the opportunity for peer supervision in various forms in each rotation, learning from each other and other staff.

Surrey Place is proud to offer a supervision opportunity for each psychology Resident. This “Layered Supervision” consists of a Registered Psychologist supervising the Resident who supervises a psychology practicum student. Furthermore, the Residents will meet with the Residency Director of Training (Residency Coordinator) on a weekly or bi-weekly basis. This is a scheduled meeting which provides the opportunity for the Residents to voice any concerns about the program, as well as highlight the positives. In addition, the Director will provide supervision as it pertains to professional issues including, but not limited to; ethics and jurisprudence in Ontario, and future professional goals.

Adult Rotation Supervisors:

Josee Casati, Ph.D., C. Psych

Dr. Casati's academic career began at the University of Toronto, and she received her PhD from the University of Toronto Ontario Institute for Studies in Adult Education – Counselling. She completed her psychology Residency at Centre for Addictions and Mental Health (CAMH) and supervised year at Surrey Place. Area of expertise and interest include cognitive-behaviour therapy assessment for the Developmental Services Ontario (DSO) for adults with disabilities and conducts assessments as part of the “Connecting the dots Toronto Homelessness Initiative”.

Layla Hall, Ph.D, C. Psych

Dr. Hall's academic career, including her doctorate studies, took place at Queen's University. She completed her clinical residency at Surrey Place. Areas of expertise and interest include child, adolescent, and adult clinical psychology with an emphasis in the areas of developmental disabilities and autism spectrum disorder across the lifespan, as well as Indigenous health and wellbeing. Dr. Hall provides intellectual and diagnostic assessments and psychotherapy. Her clinical practice has focused on cognitive therapies, including CBT, ACT and DBT skills, as well as grief and trauma-informed approaches.

Samuel Siah, Psy. D, C. Psych

Dr. Siah's academic career began at the University of Toronto, followed by his MA and doctoral degree at the University of Indianapolis. He completed his APA accredited Residency at the Watson Institute in Pittsburgh with a focus on autism. Areas of interest include assessment and treatment of neurodevelopmental disorders, and a variety of their mental health concerns from a neurodiversity positive and lifespan approach, as well as high quality supervision from a developmental, individualized and evidence-based perspective.

Valerie Temple, Ph.D, C. Psych

Dr. Temple's academic career began at the University of Toronto, followed by her doctorate studies at the University of Guelph. She completed her psychology Residency at Sunnybrook Hospital and Surrey Place Centre in Toronto. Area of expertise and interest in Adult clinical psychology, developmental disabilities, intellectual and diagnostic assessment, fetal alcohol spectrum disorder, delivering psychological services via telehealth and videoconferencing, adulthood and aging. Dr. Temple has held the position of Psychology Professional Practice lead since 2011.

Kira Vimalakanthan, Ph.D., C. Psych

Dr. Vimalakanthan's academic career, including her doctorate studies, took place at the University of Waterloo. She completed her pre-doctoral residency at Surrey Place in Toronto. Area of expertise and interest include child, adolescent, and adult clinical psychology with an emphasis in the areas of developmental disabilities, FASD, and autism across the lifespan, as well as cultural considerations for these populations

Child Rotation Supervisors:

Elizabeth McEwen, Ph.D., C. Psych

Dr. McEwen completed her doctoral training in school and clinical child psychology at the Ontario Institute for studies in Education/University of Toronto. She completed her predoctoral residency and supervised practice at Surrey Place. Dr. McEwen is interested in working with children and youth with complex needs, such as comorbid neurodevelopmental and mental health concerns. She primarily uses a psychodynamic ,attachment-focused orientation and also enjoys working with caregivers from an emotion-focused framework.

Nozomi Minowa, Psy. D, C. Psych

Dr. Minowa began her academic career at Ohio Wesleyan University, MA at Boston University and completed her Doctorate in clinical psychology at the Massachusetts School of Professional Psychology in Boston. She completed her APA accredited Residency at Boston Regional Health Hospital, Post-Doc at Cambridge Hospital and supervised practice at CAMH in Toronto. Expertise and interest in FASD, psychodynamic psychotherapy and attachment disorder; as well as EFT in working with couples and families.

Wynsome Walker, Psy. D, C. Psych

Dr. Walker's academic career began at McGill University, followed by her doctorate studies at the George Washington University. She completed her psychology residency at the APA accredited KH Mental Health Clinic in New York City, followed by supervised practice at the Hospital for Sick Children and Surrey Place Centre in Toronto. Area of interests in child, adolescent and family clinical psychology with an emphasis in the area of early childhood and developmental disabilities. Theoretical orientation of psychodynamic and attachment based, and EFT in working with parents. Dr. Walker has supervised psychology trainees since 2007 and has been Surrey Place Director Training since 2014.

Leigh Ann Wayland, Ph.D, C. Psych

Dr. Wayland's doctoral studies were in the Education and Counselling Psychology department at McGill University. She completed her psychology Residency at Hospital for Sick Children and supervised year at Surrey Place. She developed an expertise in Autism early in her career and has provided assessment, consultation, and intervention services to clients through the Toronto Autism Services and Surrey Place TRE-ADD clients. She works from a behavioural based orientation.

Odette Weiss, Ph.D., C. Psych

Dr. Weiss' academic career began at York University, where she obtained her doctorate degree in Clinical-Developmental Psychology. She completed her psychology residency at Surrey Place and has been here since that time. Areas of interest are child and adolescent clinical psychology, especially with the intellectual disability and autism spectrum disorder populations. Dr. Weiss predominantly works from a psychodynamic and attachment orientation, with other modalities incorporated as needed for clients' presenting issues.

Salary and Benefits

An annual salary of a minimum **\$40,000 per Psychology Resident position**

***Note: salary increase to be determined for the 2025 -26 training year.

4 Weeks Vacation per Residency Year, as follows:

2 weeks (4% pay in lieu of paid vacation).

1 week during winter holiday closure (Dec. 25 – Jan.1)

1 week of transition days to be used the last week of their residency.

8 paid Sick Days

All paid Statutory Holidays

5 paid professional development days for education leave, which may be used for any of the following; conferences; workshops and/or dissertation research /defense date, which clinical supervisor approval

Time Allocation

The allocation of the Resident's time is based on the Guidelines provided by the CPA Accreditation Standards and is reflected in the chart below. No more than two-thirds of Residents' time is spent in clinical practice. The time is further based on a work week of 36.25 hours per week and allows for holidays, vacation, and illness. The placement is full time, 5 days per week with time allotted to the various activities in each rotation.

Clinical service- psychological assessment, intervention & consultation. Program development & evaluation: 23.25 hours per week

Client related research, educational groups, clinical rounds, videoconferences, etc.: 6.5

Total time: 36.25

Primary Supervision with individual Child and Adult rotation supervisors: 2 hours

Layered Supervision: 1/2 hour

Group Supervision: 1 hour

Residency Supervision with Director of Training: 1 hour

Facilities

Surrey Place Psychology Residents share a large office with the psychology practicum students. Each Resident will have their own individual desk space – including a SP lap top Computer, and a SP Cell Phone. They also have access to clinical space that can be reserved for individual assessments or therapy.

Specialized Clinical Services for People with Developmental Disabilities and Autism Spectrum Disorder

Training goals

The overall training goals of the program are:

1) The development of competencies as a clinical psychologist in Assessment, Intervention and Consultation, and Supervision.

a. Assessment and Evaluation

Surrey Place offers a number of assessment opportunities in both rotations, which provides breadth in terms of presenting problems, underlying etiologies, ages, and systemic issues.

- Develop knowledge and understanding of psychological assessment procedures
- Administer and interpret psychological tests, including observation and listening skills
- Select appropriate instruments for testing
- Prepare an organized and detailed psychological report
- Demonstrate sound, useful conceptualizations of cases from assessment data for diagnostic purposes
- Make effective recommendations in accordance with best practices (i.e., evidence-based treatment options)
- Give feedback to families regarding assessment results and recommendations
- Make case presentations to an interdisciplinary team

b. Intervention and Consultation

Depending on the rotations selected, Residents can gain experience providing therapy to individuals with developmental disabilities across the lifespan, including play therapy, individual therapy, family therapy, group therapy, and intensive behavioural intervention. Develop knowledge and skills in the process of intervention with clients and/or families

- Demonstrate the ability to establish and maintain a constructive working alliance with clients and their families
- Convey concern, competence, warmth, and hope
- Demonstrate knowledge of various intervention approaches
- Communicate effectively and be aware of verbal and nonverbal cues
- Maintain appropriate notes and evaluate treatment progress
- Work with families as needed
- Consult to staff, students, and families
- Develop knowledge and understanding of systems and organizations

c. Supervision

Residents will obtain supervision and be provided opportunities to supervise others within the developmental framework, within their Child Rotation (supervision of junior psychology practicum students).

- Recognize limits and seek help from supervisors and peers when required
- Receive and utilize constructive criticism
- Learn to provide clinical supervision to staff when appropriate
- Work collaboratively with peers
- Develop a collaborative hierarchy of roles and responsibilities
- Formulate clear and attainable supervisory goals
- Respond to supervisee's professional questions and clinical dilemmas
- Provide case consultation for challenging clients
- Provide education pertinent to professional development
- Help supervisees become more theoretically coherent
- Protect the rights and welfare of client

2.) The development of psychology practice skills within a scientist practitioner model. Residents can expect to have opportunities to

- Integrate scientific thinking and an understanding of scientific validation within the clinical process
- Use the research literature to determine which assessment methods are best suited to the client
- Apply data collection and hypothesis testing to the diagnostic and treatment planning process in psychological assessment and program evaluation
- Apply clinical research methods through the Research and Program Evaluation unit, including single case design, program development, program evaluation, and applied research
- Stay current in areas of interest and specialization, completing readings assigned by supervisors and attending training and professional conferences to expand expertise

3.) Increase Residents' awareness of professional, ethical, cultural and diversity issues, as well as relevant legislation. Situated in Canada's most culturally diverse city, clinical practice at Surrey Place Centre requires cultural sensitivity and knowledge of diversity. Residents can expect to conduct treatment and assessments with individuals from marginalized groups and visible and cultural minorities.

4.) Provide experience and develop knowledge and skills in working in interdisciplinary teams. This includes developing an understanding of the roles of the psychologist, developmental pediatrician, psychiatrist, speech language pathologist, occupational therapist, behavioral therapist, manager, nurse, and audiologist in the provision of services.

Evaluation process

At the time of interview as an applicant and later as a psychology Resident, goals and objectives of the training program are disseminated through reading materials and discussion. In addition, performance evaluation forms by individual supervisors that measure objectives are shown to the Residents during their orientation.

During each rotation, there is a formal mid-rotation meeting with the Resident, their rotation supervisor, and the Psychology Residency Director of Training to ensure that training goals being met. At the end of each rotation, the rotation supervisor and the Resident each complete formal evaluation forms. The evaluations completed by the Residents remain with the Director of Training and are not shared with the supervisors until after the Resident has completed their Residency year. There is also a final meeting at the end of the training year where the Resident, the rotation supervisors, and the Director of Training meet to review the Resident's progress.

Evaluation of Resident's performance is an ongoing process. Residents, their supervisors, and the Director of Training meet and evaluate the progress of the Resident with respect to specific goals and in terms of the development of core competencies (e.g., assessment, intervention, consultation, supervision and diversity). Residents are formally evaluated in writing at the end of each rotation by their current supervisors. Comments are also interspersed through the form and a Likert scale quantifies whether attainment of objectives meets, exceeds, or is beneath expectations. Evaluations are used as a training tool to set goals and tasks that would help Residents meet the objectives. Residents receive a copy of each evaluation, and also receive a letter from the Director of Training at the end of the Residency year that outlines their progress throughout the entire year. The Director of Training sends copies of the Residents' evaluations to their respective universities.

Psychology Residency program evaluation

There is an ongoing quality management program for evaluating the Psychology Residency. This process involves collecting data from residents, supervisors, staff, and past residents. The Psychology Residency Committee: comprised of the Training Director, Clinical Supervisors and current Psychology Residents processes this information to make changes to the Residency program. At the end of each rotation, Residents are required to complete an evaluation of the rotation. Evaluations are shared with the relevant supervisor and the Psychology Residency committee after completion of the Residency. Quality control with respect to supervisors is both informal and formal. At the end of each rotation, Residents complete an anonymous formal evaluation of each supervisor, and submit these to the Director of Training for review.

Due Process

The Surrey Place Psychology Residency Policy and Procedures document provides written guidelines for how to address Psychology Resident or Psychology Residency concerns.

Eligibility

The Residency is open to students completing their dissertation in clinical psychology, participating in the APPIC National Matching Service and applying through the National Matching Service matching process. The minimum criterion is doctoral training in a CPA or APA accredited psychology program with a scientist-practitioner orientation. CPA accreditation standards require that programs be part of provincially or territorially chartered universities and have a three-year, full-time Residency /Residency requirement. Residents coming from accredited APA programs must be enrolled in a university-based program. We are looking for doctoral students who are knowledgeable about autism and developmental disabilities, who have a behavioural orientation in their approach to treatment and have completed the appropriate coursework and practica in assessment and intervention, with children and/or adults. Both Residency positions complete rotations within both the Surrey Place Child Program (Children and Youth) as well as in the Surrey Place Adult Program. Our clients present with a range of challenging cognitive, behavioural, affective, and diagnostic issues. As a consequence, we require a minimum of 600 practicum hours in assessment and intervention training. These hours will be verified by reviewing the APPICA-API application form that is submitted by the applicant and approved by their sending institution.

The Surrey Place Psychology Residency 1 year contract begins on the first Tuesday in September and concludes on the last Friday in August each year.

The 2025 – 2026 Training year is:

Tues. September 2, 2025 – Fri. August 28, 2026.

Additional information for applicants:

For the past 18 years, the Surrey Place Psychology Residency has accepted 2 Residents per year. The average number of applicants to the program over the past 3 years has been 20. All (100%) of past Residents have become registered for practice as psychologists in Canada, or they are candidates to be registered within a province of Canada.

The Surrey Place Psychology Residency is part of the Association of Psychology Postdoctoral and Residency Centers (APPIC) Match process and applicants are required to complete the on-line APPIC Application for Psychology Residency (AAPI)

How to Apply

The Surrey Place Psychology Residency program follows the Association of Psychology Postdoctoral and Residency Centers (APPIC) guidelines and participates in the APPIC National Matching Service (see www.appic.org for APPIC's policies). All applicants must register with the National Matching Service (NMS) to be considered. Applicants will be required to submit a completed application form (APPIC – AAPI).

This Psychology Residency site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept or use any ranking-related information from any Resident applicant. Applicant information is secured by the Director of Training and is shared only with those individuals involved in the evaluation of the Psychology Residency application. Residents who are not matched to Surrey Place will have their information destroyed within four months of the APPIC Match Day. Successfully matched candidates will have their CV and application made available to rotation supervisors, the Director of Training, and relevant administrative support and human resources staff.

IMPORTANT DATES!

Deadline for submission of applications:

November 15, 2024 (by 11:59pm)

Please make your application through the APPI online registration site: www.APPIC.org

Surrey Place National Matching Services Code is #185511

Candidates will be notified of an interview invitation on:

Friday, December 6, 2024

Interviews will be conducted with selected applicants between:

January 20 – 24, 2025

International APPIC MATCH notification day is

Friday, February 21, 2025
